

Error installing VW (Blue Screen) or “Error applying transforms”

1. First Uninstall VW profile package and then uninstall Versaworks:

	VersaWorks	91.1 MB 2/4/2019
---	------------	---------------------

	VersaWorks Profile Package	2/4/2019
---	----------------------------	----------

NOTE: You might get an error when uninstalling Versaworks “Error applying transforms”. If that is the case, you will need a third party uninstaller. I like to use this free one:

<https://www.iobit.com/en/advanceduninstaller.php>

2. Uninstall Microsoft Visual C++ 2015:

	Microsoft Visual C++ 2015-2019 Redistributa...	20.2 MB 3/24/2020
--	--	----------------------

Note: Please uninstall both x64 and x86 versions of Visual C++ 2015

3. Reboot the computer
4. Turn off any antivirus if they have any.
5. Install the Visual C++ 2015 from this link:
<https://www.microsoft.com/en-us/download/details.aspx?id=52685>

Note: Only install the x64 version not the x86.

6. Install VW again as admin.

NOTE: Sometimes a PC may have many different versions of Visual C++, if removing the 2015 did not resolve the issue, you can try removing all other versions as well and just leave the new downloaded one.
